| Sequence 30, Application US/08330535A
| Patent No. 5659024
| GENERAL INFORMATION:
| APPLICANT: Reed, John C. APPLICANT: Harigai, Masayoshi
| TITLE OF INVENTION: THAT REGULATE THE EXPRESSION OF GENES INVOLVED IN CELL
| TITLE OF INVENTION: DEATH
| NUMBER OF SEQUENCES: 30
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: Campbell & Flores LLP
| STREET: 4370 La Johla Village Drive, Suite 700
| STREET: 4370 La Johla Village Drive, Suite 700
| STATE: California
| COUNTRY: USA
                                                                                                                                              Gaps

Patent No. 5744310
GENERAL INFORMATION:
APPLICANT: Reed, John C.
TITLE OF INVENTION: BAX Promoter Sequence and Screening
Patent No. 5744310
TITLE OF INVENTION: Assays for Identifying Agents that Regulate BAX Gene
TITLE OF INVENTION: Expression
NUMBER OF SEQUENCES: 20
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Flores

Sequence 24, Application US/09928385B
Patent No. 6544746
GENERAL INFORMATION:
APPLICANT: Heyduk, Tomasz
TITLE OF INVENTION: A Rapid and Sensitive Proximity-Based Assay for the Detection
TITLE OF INVENTION: A Rapid and Quantification of DNA Binding Proteins
FILE REFERENCE: 16153-7963
CURRENT APPLICATION NUMBER: US/09/928,385B
CURRENT FILING DATE: 2002-01-14
NUMBER OF SEQ ID NOS: 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-928-385B-24/C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 4, Application US/08713052

Patent No. 5840673

GENERAL INFORMATION:
APPLICANT: Buckbinder, Leonard R.
APPLICANT: Kley, Nikolai
APPLICANT: Seizinger, Bernd
TITLE OF INVENTION: Insulin-Like Growth Factor Binding
TITLE OF INVENTION: Protein 3 (IGF-BP3) in Treatment of P53-Related Tumors
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Patent No. 5840673
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Kley, Nikolai
APPLICANT: Seizinger, Bernd
TITLE OF INVENTION: Insulin-Like Growth Factor Binding
TITLE OF INVENTION: Protein 3 (IGF-BP3) in Treatment of P53-Related Tumors
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: EN PC Compatible
COMPUTER: EN PC Compatible
COPERATIOR SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/657,828A
FILING DATE: 31-MAY-1996
CLASSIFICATION NUMBER: US/08/657,828A
FILING DATE: 31-MAY-1996
CLASSIFICATION NUMBER: 32,028
REGISTRATION NUMBER: 32,028
REGISTRATION NUMBER: 32,028
REGISTRATION NUMBER: 31,028
REGISTRATION NUMBER: ONYX1021
TELEPHONE: 510-262-8710
TELEPHONE: 510-768-8710
SEQUENCE CHARACTERISTICS:
LENGTH: 20 base pairs
TWAND: MICLEIC acid
SOFTWARE: Patentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA: APPLICATION NUMBER: US/08/657,828A FILING DATE: 31-MAY-1996 CLASSIFICATION: 435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Mismatches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADDRESSEE: Onyx Pharmaceuticals, Inc. Sequence 8, Application US/07959119A

Patent No. 5487985

GENERAL INFORMATION:

APPLICANT: Mcclelland, Michael

APPLICANT: Welsh, John T.

APPLICANT: Sorge, Joseph A.

TITLE OF INVENTION: Reaction Method For Fingerprinting Genomes

NUMBER OF SEQUENCES: 16

CORRESPONDENCE ADDRESS:

ADDRESSEE: Pennie & Edmonds

STREET: 2730 Sand Hill Road

CITY: Menlo Park

STATE: California

COUNTRY: U.S.A.
 Pattaey, Ali
VENTION: Methods and Compositions for Determining
                                     the Tumor Suppressor Status of Cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 20;
                                                                                                                                                                         Patentin Release #1.0, Version #1.25

Sequence 9, Application US/08646301A

Patent No. 619421

GENERAL INFORMATION:

APPLICANT: Richards, Cynthia Ann

APPLICANT: Huber, Brian E.

TITLE OF INVENTION: Transcriptional Regulatory Sequence of Carcinoembryonic

Patent No. 6194211

TITLE OF INVENTION: Antigen for Expression Targeting

TITLE OF INVENTION: Antigen for Expression Targeting

TITLE OF INVENTION: Antigen for Expression Targeting

TITLE OF INVENTION: DATE: 1996-05-16

NUMBER OF SEQ ID NOS: 25

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 9

LENGTH: 8
                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Sequence 1, Application US/07882838E
Patent No. 5616461
GENERAL INFORMATION:
APPLICANT: Priscilla A. Schaffer
APPLICANT: Christine E. Dabrowski Amaral
APPLICANTON: METHODS AND COMPOSITIONS FOR
TITLE OF INVENTION: TREATMENT OF VIRUS INFECTIONS
NUMBER OF SEQUENCES: 49
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn
STREET: Mondiplia
STREET: One Liberty Place
CITY: Philadelphia
STREET: Pennsylvania
COUNTRY: U.S.A.
COUNTRY: U.S.A.
APPLICANDER FRADABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
COMPUTER: MAN PSP. 2 Model 502 or 55SX
OMPUTER: WordPerfect (Version 3.30)
SOFTWARE WordPerfect (Version 5.1)
CURRENT APPLICATION NUMBER: US/07/882,838E
FILING DATE: MAY 14, 1992
                                                                                                                                            CITY: Philadelphia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 34, Application US/08122433
Patent No. 5683985
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Chu, Barbara C.F.
APPLICANT: Orgel, Leelle
TITLE OF INVENTION: OLIGODEOXYNUCLEOTIDES AND
TITLE OF INVENTION: OLIGONICLEOTIDES USEFUL AS DECOYS FOR PROTEINS WHICH
TITLE OF INVENTION: SELECTIVELY BIND TO DEFINED DNA SEQUENCES
NUMBER OF SEQUENCES: 47
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Indels

Patent No. 6046380

GENERAL INFORMATION:
APPLICARK, Anthony J.
TITLE OF INVENTION: DNA SEQUENCES
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: STERNE, KESSLER, GOLDSTEIN & FOX, P.L.L.C.
STREET: 1100 NEW YORK AVENUE, NW, SUITE 600
CITY: MASHINGTON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COUNTRY: USA

ZIATE: DC

COUNTRY: USA

ZIP: 20005-3934

COMPUTER EXADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-005/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/742,877
FILING DATE: 01-NOV-1996
CLASSIFICATION NUMBER: GB 9408717.8
FILING DATE: 03-MA-1994
ATTORNEY/AGENT INFORMATION:
NAME: FLESHNER: 34.331
REFERENCE/DOCKET NUMBER: 34.331
REFERENCE/DOCKET NUMBER: 34.331
REFERENCE/DOCKET NUMBER: 34.331
REFERENCE/DOCKET NUMBER: 36.331

Sequence 23, Application US/08485863A

Sequence 23, Application US/08485863A

Patent No. 6093548

GENERAL INFORMATION:
APPLICANT: Zavada, Jan
APPLICANT: Pastorek, Jaromir
ITILE OF INVENTION: MN Gene and Protein
NUMBER OF SEQUENCES: 86

CORRESPONDENCE ADDRESS:
ADDRESSE: Leona L. Lauder
STREET: G Mariposa Court
CITY: Tiburon
STARET: G Mariposa Court
CITY: USA
ZIP: 94920

COMPUTER READBLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTRARE: PatentIN Release #1.0, Version #1.30 (EPO)
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/485,863A
FILING DATE: O'-JUN-1995
CLASSIFICATION NUMBER: US 08/260,190
FILING DATE: LEON
APPLICATION NUMBER: JO. 994
ATTORNEY/AGENT INFORMATION:
NAME: Lauder, Leona L.
REFERENCE/DOCKET MINDER:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 47, Application US/09258367

Patent No. 6114311

GENERAL INFORMATION:

APPLICANT: PARMACEK, MICHAEL S.

APPLICANT: POLNANY, UULIAN

TITLE OF INVENTION: PROMOTER FOR SMOOTH MUSCLE CELL EXPRESSION

FILE REPERENCE: ARCD:310

CURRENT APPLICATION NUMBER: US/09/258,367

CURRENT FILING DATE: 1999-02-26

EARLIER FILING DATE: 1999-01-07

NUMBER OF SEQ ID NOS: 55

SOFTWARE: PATENTING OF SEQ ID NOS: 55

SOFTWARE: PATENTING OF SEQ ID NOS: 55
                                                                                                                                                                                                                                                                                                                                                                                                COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATIONS SYSTEM: PC-DOS/MS-DOS
SOGTWARE: PatentIn Release #1.0, Version #1.30 (EPO)
CURRENT APPLICATION DATA:

Patent No. 6207377
GENERAL INFORMATION:
APPLICANT: Wayne, Jay /
APPLICANT: Xu, Shuang-yong
TITLE OF INVENTION: Method For Construction Of Thermus-E. coli Shuttle
TITLE OF INVENTION: Vectors And Identification of Two Thermus Plasmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .;

Patent. No. 6291211

GENERAL INFORMATION:
APPLICANT: PARMACEK, MICHAEL S.
APPLICANT: PARMACEK, MICHAEL S.
TITLE OF INVENTION: PROMOTER FOR SMOOTH MUSCLE CELL EXPRESSION
FILTE OF INVENTION: PROMOTER: US/09/431,414
CURRENT APPLICATION NUMBER: US/09/431,414
CURRENT APPLICATION NUMBER: 08/726,807
EARLIER FILING DATE: 1996-10-07
NUMBER OF SEQ ID NOS: 55
SOFTWARE PATENTION OF SECOND SECO

1 Sequence 47. Application US/09431414

5 Patent No. 6291211

5 GENERAL INPORMATION:

APPLICANT: PARMACEK, MICHAEL S.

7 APPLICANT: SOLWAY, UULIAN

7 TITLE OF INVENTION: RACONTER FOR SMOOTH MUSCLE CELL EXPRESSION

7 TITLE OF INVENTION: PROMOTER FOR SMOOTH MUSCLE CELL EXPRESSION

7 CURRENT APPLICATION NUMBER: US/09/431,414

6 CURRENT PILING DATE: 1999-11-01

7 EARLIER PILING DATE: 1999-11-01

8 EARLIER PILING DATE: 1996-10-07

8 NUMBER OF SEQ ID NOS: 55

8 SEQ ID NOS: 55

8 SEQ ID NOS: 55
